

Select C:\Windows\System32\cmd.exe

Once your application is deployed, use the status, describe, and get commands to see more about the created components:

```
oc status
oc describe deploymentconfig ruby-ex
oc get pods
```

To make this application visible outside of the cluster, use the expose command on the service we just created to create a 'route' (which will connect your application over the HTTP port to a public domain name).

```
oc expose svc/ruby-ex
oc status
```

You should now see the URL the application can be reached at.

To see the full list of commands supported, run 'oc --help'.
